

Introducing "Scimitar" – a Wave Piercing Catamaran Luxury Motor Yacht

AMD Marine Consulting (AMD) is a naval architectural and marine engineering consultancy which specialises in the design of fast ferries, patrol vessels, and other high speed vessels.

Spear Green Design (SGD) are award winning marine interiors and styling specialists.

Having worked together on several successful high speed commercial projects in the Middle East and Asia, the two companies have teamed up to form a series of new luxury vessels, based on a proven and successful platform – the Wave Piercing Catamaran (WPC). There are many AMD designed WPC vessels operating worldwide including the world's fastest ferry – at 57 knots fully loaded (Buquebus).

AMD is currently carrying out an owner's

technical representative role in a fast vessel project for the government of Oman. The project involves the procurement of five high speed passenger vessels to be operated by the Oman National Ferries Company and two 52-metre WPC patrol/rescue boats for the Royal Oman Police Coast Guard. The two coast guard vessels and two 65-metre fast ferries have been delivered from yards in Italy and Australia, and "Sawqrah", a 52-metre ferry, has recently arrived in Muscat. Spear Green Design has designed, specified and documented beautiful, effective and functional marine interiors for all of these seven projects.

The Scimitar WPC is a Luxury Motor Yacht project which is based on a successful platform. The aluminium vessel is able to be built in many

commercial yards worldwide at realistic costs. The vessels have been proven to be fast and safe with exceptional ride control and superior sea keeping – even in the monsoon conditions experienced in southern Oman. The Scimitar offers considerably larger areas and deck spaces than similar length conventional monohull vessels. A very modern and contemporary styled vessel has been created on the successfully proven WPC platform. Visit us at DIBS to discuss the unique 40m to 60m Scimitar series of luxury vessels.
